Code to allow your site to work on http or https

This is NOT mandatory yet, but here is some code to change to get your site working over https.

In ApiService.js, try using the following code to build the `apiUrl` in replacement of the provided code.

```
const portFrom = {  
  'http:': ':8080',  
  'https:': ':8443'  
}  
  
const url = location.protocol + '//' + location.hostname + portFrom[location.protocol] + process.env.BASE_URL + 'api'
```

run code snippet

Then you *should* be able to access `https://cs5244.cs.vt.edu/[Name]BookstoreFetch` and have your project work.

Let me know if you have any issues

Thanks Dr.A!

A small correction - The variable name should be `apiUrl` and not `url` in accordance with the next part of the code.
