## Using images inside Vue: a Cheat Sheet

Referring to images in Vue in different places is a little complex.

Here is a cheat sheet for all these assets:

For static image references in templates: `src="@/assets/images/site/cr-facebook-icon.jpeg"`

For dynamic image references in templates

```
:src="require('@/assets/images/books/' + bookImageFileName(book))"
```

To import css in JavaScript

```
import "@/assets/css/example.css";
```

To import css in style of a Vue component

```
@import '@/assets/css/example.css';
```

To have a static background image in css

```
background-image: url('~@/assets/site/neonbrand-394691-unsplash.jpg');
```

I hope that helps.

Where do we code the bookImageFileName function? I am having trouble figuring out where the correct place is for this in my project and when I reference it in the CategoryBookListItem.vue I am getting an error

[Vue warn]: Error in render: "TypeError: \_vm.bookImageFileName is not a function"
